

About Nivakaran Shanmugabavan (Nivakaran S.)

Who I Am

Hi, I'm Nivakaran Shanmugabavan, a software engineer deeply passionate about bridging the world of data science, artificial intelligence, and practical engineering. My work revolves around building smart, scalable, and purposeful AI systems, from real-time computer vision apps to language models and agentic assistants. I am currently a B.Sc(Hons) in Information Technology undergraduate at SLIIT.

I love teaching machines to understand the world, whether that's through natural language, images, or structured data, and designing systems that feel human, intuitive, and intelligent.
